# Sampling

## Sampling Procedure

---

The enterprise is the unit of enumeration in the LTS and it has for its sampling domain the fourteen (14) major industry groups (1-digit) based on the 1994 PSIC. The coverage of the survey was limited to large business enterprises in Metro Manila due to budget constraints and in line with the instruction of DOLE officials to conduct a quick/timely assessment of the labor market activity through a sample survey with manageable sample size. Metro Manila accounts for one-third of the country's gross domestic product and about two-thirds (64.5%) of the total large business enterprises in the Philippines.

The sampling frame was extracted from the Top 10,000 Corporations in the Philippines as compiled by the Securities and Exchange Commission (SEC). The frame contains the names of 3,064 enterprises in Metro Manila listed in order of their gross revenue/sales in 2011.

The sampling design is stratified random sampling wherein the 3,064 firms ranked according to revenue would be stratified into two. The first stratum would consist of the Top 200 firms and would be taken as certainty stratum which means that all of these 200 firms would be part of the sample. The second stratum would comprise the remaining 2,864 firms from which a random sample of 500 would be taken.

A total of 700 sample enterprises shall be taken.

## Deviations from Sample Design

---

Replacement of sample enterprise is done when the sampled enterprise falls in one of the following situation during the field operation: (1) cannot be located; (2) refuse to answer; (3) temporarily closed; (4) duplicate of another sample enterprise; (5) permanently closed; or (6) on strike.

## Response Rate

---

## Weighting

---

Weights were not computed.

### Data Collection Mode

---

Other [oth] mixed method: self-accomplished, mailed, e-mailed, faxed, face-to-face

### Data Collection Notes

---

The conduct of training on data collection and field editing for field personnel was done a week before the actual data collection to ensure that statistical and survey standards are observed.

Survey Area Supervisors were assigned to allocate questionnaires to project-based field personnel. Sample questionnaires were distributed to field personnel based on their respective area assignments. They were also provided with FM-BLES 02-2.2a "Enumerator's Control List" where they can record the status of the questionnaires and contact information of the respondents.

Each enumerator was provided with a letter of introduction, signed by the BLES Director, to be presented to the sample enterprise. Upon reaching the enterprise, the enumerator introduces himself/herself to the receptionist or to any person who can refer him/her to the HRD/personnel manager or the designated employee responsible for answering government surveys. In such instance, the enumerator re-introduces himself/herself to this contact person.

The retrieval of questionnaires can be on-the-spot upon delivery. If not possible, the enumerator and respondent/contact person can agree on the pick-up date or the respondent can send the accomplished LTS form thru electronic mode, e.g., fax or e-mail as long as the certification portion is duly signed or noted by the contact person.

Survey status report on the questionnaire retrieval rate and performance rating of enumerators are done every 5th and 20th day of the month.

## Supervision

Survey supervisors for each area are assigned with the following roles:

- Participate in the training on data collection and field editing;
- Supervise field operation in their areas of assignments within the allotted time;
- Allocate, receive and control survey questionnaires;
- Check completeness and consistency of entries in retrieved questionnaires and return for verification those needing further clarifications to concerned enumerators;
- Deliver questionnaires if necessary, conduct follow-ups, spot checks and verification; monitor and evaluate the performance of field personnel for purposes of payment of salaries;
- Ensure the confidentiality of the data provided by the respondents.

# Data Processing

## Data Editing

---

Data are manually and electronically processed. Upon collection of accomplished questionnaires, enumerators perform field editing before leaving the enterprise to ensure completeness, consistency and reasonableness of entries in accordance with the Field Operations Manual. The forms were again checked for data consistency and completeness by field supervisors. The designated personnel undertook the final review, coding of information on classifications used, data entry and validation and scrutiny of aggregated results for coherence. Questionnaires with incomplete or inconsistent entries were returned to the establishments for verification, personally or through phone interview.

Note: Refer to Office Editing and Data Validation Guidelines in Technical Documents.

## Other Processing

---

Processing involves the following activities:

- 1.) Batch labeling
- 2.) Office editing and coding
- 3.) Status monitoring and printing of Survey Status Report (5th and 20th of the month)
- 4.) Data entry (MS Access)
- 5.) Data validation
- 6.) Re-encoding of data
- 7.) Screen validation (Revalidation)
- 8.) Back-up MS Access database
- 9.) Conversion of file from the MS Access to SPSS
- 10.) Computation of weights and recoding of certain variables
- 11.) Output table generation

Note: Refer to Office Editing and Data Validation Guidelines and programs for table generation.

## Data Appraisal

### **Estimates of Sampling Error**

Not computed.

### **Other forms of Data Appraisal**

The results were validated with the previous year results in particular, the trend and patterns of data behaviour across industry.

Results were also checked in terms of their coherence with the results of the National Accounts, i.e, gross domestic product (GDP). It has been observed that the pattern of movement in the LTS data series closely follow that of GDP. This could be because NCR accounted for a sizeable share of GDP. The "rule of thumb" in LTS validation is that a high GDP is associated positive turnover rate and vice versa.
