Overview

ABSTRACT

Census of Population and Housing refers to the entire process of collecting, compiling, evaluating, analyzing, and publishing data about the population and the living quarters in a country. It entails the listing and recording of the characteristics of each individual and each living quarter as of a specified time and within a specified territory.

Census 2000 is designed to take an inventory of the total population and housing units in the Philippines and to collect information about their characteristics. The census of population is the source of information on the size and distribution of the population as well as information about the demographic, social, economic and cultural characteristics. The census of housing, on the other hand, provides information on the supply of housing units, their structural characteristics and facilities which have bearing on the maintenance of privacy, health and the development of normal family living conditions. These information are vital for making rational plans and programs for national and local development.

The Census 2000 aims to provide government planners, policy makers and administrators with data on which to base their social and economic development plans and programs.

May 1, 2000 has been designated as Census Day for the 2000 Census of Population and Housing or Census 2000, on which date the enumeration of the population and the collection of all pertinent data on housing in the Philippines shall refer.

KIND OF DATA
Census/enumeration data [cen]

UNITS OF ANALYSIS
Individual

Households

Scope

NOTES

The Scope of the Census of Population and Housing (Sampling) includes:

- Individual: Socio-demographic characteristics, age, sex, marital status, religious affiliation, ethnicity, highest grade completed, residence 5 years ago

- Household: Household characteristics, household size, fuel for lighting, fuel for cooking, source of water supply for drinking and cooking, source of water for laundry and/or bathing, tenure status of the housing unit, acquisition of housing unit, source

of financing, tenure status of the lot, monthly rental of the housing unit or lot, usual manner of garbage disposal, kind of toilet facility, presence of household conveniences, Inad ownership, language generally spoken in the household, residence five years from now

- Housing: Housing Characteristics, type of building, construction materials of the roof and walls, state of repair, year building/house was built, floor area of the housing unit

Coverage

GEOGRAPHIC COVERAGE

National, Regional, Provincial, and City/Municipal Coverage

GEOGRAPHIC UNIT

City/Municipality

UNIVERSE

The Census 2000 covered all persons who are alive as of 12:01 a.m. of May 1, 2000 and who are:

- Filipino nationals permanently residing in the Philippines;
- Filipino nationals who are temporarily at sea or are temporarily abroad as of census date;
- Filipino overseas workers as of census date, even though expected to be away for more than a year;
- Philippine government officials, both military and civilian, including Philippine diplomatic personnel and their families, assigned abroad; and
- Civilian citizens of foreign countries having their usual residence in the Philippines or foreign visitors who have stayed or are expected to stay for at least a year from the time of their arrival in this country.

Sampling

Sampling Procedure

In the Census 2000, there are basically two types of questionnaires to be used for the enumeration of households members. These are CPH Form 2 or the Common Household Questionnaire and the CPH Form 3 or the Sample Household Questionnaire. There are procedures for selecting those households to whom CPH Form 3 will be administered. All enumerators are required to strictly follow these procedures.

The sampling rate, or the proportion of households to be selected as samples within each EA, varies from one EA to another. It can be either 100%, 20% or 10% depending on the size of the municipality where the EA is located. If the sampling rate applied to an EA is 100%, it means that all households in that EA will use CPH Form 3. If it is 20% or 10%, it means that one-fifth or one-tenth, respectively, of all households will use CPH Form 3 while the rest will use CPH Form 2. The different sampling rates are given below:

No. of Households in the Municipality Sampling Rate

1 - 500 100%

501 - 1500 20%

1501 and above 10%

The sampling rate for each municipality was identified before the start of the census enumeration based on the estimated number of households.

The scheme for the selection of sample households is known as systematic sampling with clusters as the sampling units. Under this scheme, the households in an EA are grouped in clusters of size 5. Clusters are formed by grouping together households that have been assigned consecutive serial numbers as they are listed in the Listing Page.

Response Rate

N/A

Questionnaires

Overview

The questionnaires for 2000 Census of Population and Housing were basically patterned from previous censuses except for the format which were in Intelligent Character Recognition (ICR) .

CPH Form 3 - Sample Household Questionnaire

This is the basic census questionnaire, which will be used for interview and for recording information about the sample households. This questionnaire contains the same question as in CPH Form 2 which are relationship to household head, family nucleus, date of birth, age, birth registration, sex, marital status, religious affiliation, disability, ethnicity, residence five years ago and highest educational attainment. Additional questions, namely: citizenship, language, literacy, school attendance, type of school, place of school, usual activity/occupation, kind of business/industry, place of work and some items on fertility are also included in CPH Form 3. It also asks additional questions on household characteristics and amenities and residence five years ago.

The questionnaire was developed in English and was translated to major dialects: Bicol, Cebuano, Hiligaynon, Ifugao, Ilocano, Kapampangan, Tagalog, and Waray.

Supervision

Field supervision for the Census 2000 commenced right after the last level of training. Throughout the enumeration period NSO field supervisors, DECS personnel (now DepEd) assigned as Census Area Supervisor (CAS) and Team Supervisor (TS), and other agencies assigned as supervisors went to field to supervise the conduct of enumeration and check if the enumerators are at work.

To ensure that the enumeration procedures were done properly, field supervisors including the CAS and the TS were asked to review CPH questionnaires accomplished by the enumerators and then to accomplished CPH Form 13 or the Reinterview/spot-check form.

Data Processing

Data Editing

Processing of census forms consists of manual and machine data processing. Prior to machine processing at the Data Capture Center (DCC), census questionnaires were subjected to manual processing done by Census 2000 Provincial Project Staff (PPS 2000) at the provincial office. Manual processing consisted several activities including the verification of geographic identification and completeness of forms, document preparation and packaging of forms for transmission to respective DCC for the second phase operation. The DCC was primarily created to handle data capture and forms processing to come up with image and text files. These files will be used as input to further processing to come up with the statistical tables.
