Overview

ABSTRACT

The Annual Survey of Philippine Business and Industry (ASPBI) aims to collect and generate information on the levels, structures, performance and trends of economic activities of the formal sector in the entire country for the year 2021.

Like the ASPBI 2020 operations, the data processing will be decentralized to the Provincial Statistical Services Offices (PSSOs) as the provinces are near the establishments which are data source of the survey.

Specifically, the ASPBI 2021 aims to:

- collect and generate detailed information on employment, revenue, expense, inventories, tangible fixed assets, intangible assets and total assets of the establishments;
- generate estimates for other economic indicators such as value added, average compensation and other indicators which are necessary to evaluate the performance of industries at the national and regional levels;
- generate statistics for micro, small and medium establishments where identification of Micro, Small and Medium Enterprise (MSME) is based on total employment; and
- gather pertinent information for the updating of the sampling frame of establishment-based surveys.

The data collected from the ASPBI will constitute bases upon which the government and the private sector can formulate policies and evolve economic development plans.

Specifically, the survey results are used in:

- constructing national and regional income accounts of the Philippine economy;
- formulating and monitoring plans/policies in the attainment of national and regional economic goals;
- determining and comparing regional economic structures and performances;
- analysing economic performance of MSMEs;
- conducting market research and feasibility studies; and
- updating the sampling frame for establishment-based surveys.

The conduct of the ASPBI 2021 is in accordance with Republic Act (RA) No. 10625 (Philippine Statistical Act of 2013), which authorizes the PSA to prepare and conduct periodic censuses on various sectors of economy and Executive Order No. 352 mandating the conduct of ASPBI every year.

GEOGRAPHIC UNIT

The primary consideration in the determination of sample size for the survey was its manageability at the optimum level of estimated budget without compromising the reliability and accuracy of survey results and the timeliness of retrieval of accomplished questionnaires from respondents.

Sample sizes for each of the strata were determined separately by employment stratum to achieve a minimum precision of 4% margin of error for a 90% confidence interval on employment estimates. Then, the sample size for industry stratum was determined by applying specified sampling rates and allocation rule for each employment stratum. Total sample size was obtained by aggregating separately each estimate at the industry stratum.

For sampling purposes, the survey frame was divided into the five primary strata. Stratum 1 comprises of Mining and Quarrying (B) and Electricity, Gas, Steam and Air Conditioning Supply (D); Stratum 2 consists of certainty industries including the Information and Communication Technology (ICT) core industries and Business Process Management (BPM) industries; Stratum 3 for GOCCs; Stratum 4 is composed of establishments with TE 100 and over; and all other establishments not classified in strata 1-4 were grouped as Stratum 5 and were treated as Non-Certainty Stratum. Strata 1-4 were considered as certainty stratum.

UNIVERSE

The ASPBI 2021 covered all establishments that are confined to the formal sector of the country's economy.

Sampling

Sampling Procedure

The ASPBI 2021 uses a stratified systematic sampling design with 3-digit or 5-digit PSIC as the first stratification variable, depending on the section and total employment, which is classified into Micro, Small, Medium establishments (MSME), as the second stratification variable.

Stratified systematic sampling is a process of dividing the population into homogeneous groups, called strata, and then selecting independent samples in each stratum systematically. This method ensures that all important subgroups of the population are represented in the sample and increases the precision of "overall" survey estimates.

Domain

The geographic domain of the ASPBI 2021 is the region. The industry domain/stratum is a 3-digit or 5-digit industry classification, and the employment domain/stratum is the MSME classification.

Unit of Enumeration

The unit of enumeration for the ASPBI 2021 is the establishment.

To know more about the estimation procedure please refer to the ASPBI 2021 technical notes pages 8-12.

Response Rate

The total number of sample establishments for the survey operations was 41,500, of which 37,689 or 90.8 percent responded. This included receipts of "good" questionnaires, partially accomplished questionnaires, and reports of closed, moved out, or out-of-scope establishments.

Of the total responses, 2,734 establishments or 7.3 percent responded online.

Weighting

Kindly refer to pages 8-9 of the ASPBI 2021 Technical Notes.
