## FOREWORD

The *2009 Philippine Standard Industrial Classification (PSIC)* presents the latest revision on the country's standard industrial classification undertaken by the National Statistical Coordination Board (NSCB) in collaboration with concerned agencies in the Philippine Statistical System (PSS).

The PSIC is a detailed classification of industries prevailing in the country based on the productive activities undertaken by establishments. It serves as a guide in the classification of establishments according to their primary economic activity which is useful for analysis. It also serves as a framework for data collection, processing and compilation to secure uniformity and comparability of industrial statistics produced by both government and private sectors in the country.

The 2009 PSIC was patterned after the United Nations International Standard Industrial Classification (UN-ISIC) Revision 4, but with some modifications to reflect national situation and requirements. Like its previous editions, it guarantees international comparability of statistics relating to economic activities of industries and establishments generated in the PSS.

The NSCB periodically revises the country's industrial classification system to: (a) reflect changes in the economic activities, such as the emergence of new industries; (b) take into account the new technologies employed which affect the organization of production and shifting of economic activities; and (c) realign with the UN-ISIC revisions for purposes of international comparability.

Changes in various economic activities brought about by the introduction of new technologies and the emergence and growing importance of new industries especially in the Business Process Outsourcing (BPOs), such as Back-office operations activities; Engineering outsourcing activities; and Information and Communications Technology (ICT) activities, such as Internet café, Voice over Internet Protocol (VOIP) services; and other related industries which were not in the 1994 PSIC are incorporated in the 2009 PSIC.

The preparation of the 2009 PSIC was made possible with the guidance of the Technical Working Group on Industrial Classification (TWG-IC) chaired by the Bureau of Exports and Trade Promotions (BETP) of the Department of Trade and Industry (DTI) under the NSCB Technical Committee on Statistical Standards and Classifications (TCSSC).

Pursuant to NSCB Resolution No. 2 Series of 2010, all concerned government agencies and instrumentalities are enjoined to adopt the 2009 PSIC.

**NSCB Resolution No. 2**  
Series of 2010

**APPROVING AND ADOPTING THE 2009 PHILIPPINE  
STANDARD INDUSTRIAL CLASSIFICATION (PSIC)**

**WHEREAS**, standard classification systems are used to achieve uniformity and comparability of statistics generated at the national and international levels;

**WHEREAS**, the National Statistical Coordination Board (NSCB) develops and prescribes uniform standards and classification systems in the generation of official statistics to ensure harmonization of statistics in the country and at the international level;

**WHEREAS**, one of the classification systems being maintained by the NSCB is the Philippine Standard Industrial Classification (PSIC), which is based on the International Standard Industrial Classification (ISIC) issued by the United Nations Statistics Division (UNSD);

**WHEREAS**, the current 1994 PSIC was amended in 2002 based on the ISIC Rev. 3.1 issued by the UNSD in the same year;

**WHEREAS**, the UNSD issued ISIC Rev. 4 in August 2008 in order to reflect new industries, new production pattern and new needs for economic analysis, as well as to improve linkages to major regional classifications;

**WHEREAS**, the NSCB Technical Committee on Statistical Standards and Classifications (TC-SSC), through its Technical Working Group on Industrial Classification (TWG-IC), has reviewed and recommended the 2009 Philippine Standard Industrial Classification (PSIC) which is aligned with the ISIC Rev. 4, taking into account the significant changes on the relative importance of various economic activities in the country that have taken place since 2002;

**WHEREAS**, the ASEAN Heads of Statistical Offices Meeting (ASHOM) approved in November 2006 the ASEAN Common Industrial Classification (ACIC) based on ISIC Rev. 4 which was developed by the ASEAN Task Force on the Harmonization of Industrial Classifications for adoption by the ASEAN member countries;

**NOW, THEREFORE, BE IT RESOLVED, AS IT IS HEREBY RESOLVED**, that the NSCB Executive Board approve the 2009 PSIC with correspondence codes to link with the ACIC, for adoption by concerned government agencies and instrumentalities.

Approved this 10<sup>th</sup> day of February 2010 in Pasig City.

**TO: All Agencies of the National and Local Government, Government-Owned and/or Controlled Corporations Involved in the Statistical Activities of the Government**

**SUBJECT: Guidelines for the Adoption and Use of the 2009 Philippine Standard Industrial Classification (PSIC)**

---

Pursuant to NSCB Resolution No. 2, Series of 2010 approved on the 10<sup>th</sup> day of February 2010 entitled, "Approving and Adopting the 2009 Philippine Standard Industrial Classification (PSIC)," the following guidelines are hereby issued:

**1. Purpose and Uses of the 2009 PSIC**

The *2009 Philippine Standard Industrial Classification (PSIC)* is a detailed classification of industries prevailing in the country according to the kind of productive activities undertaken by establishments. For purposes of international comparability, the 2009 PSIC is patterned after the United Nations International Standard Industrial Classification, Revision 4 (ISIC Rev 4) with some modifications to suit national situation and requirements. The 2009 PSIC is the latest version released by the NSCB after the 1994 PSIC was amended in 2002.

The PSIC serves as a guide in the classification of establishments according to their economic activity useful for economic analysis. It serves as a framework for data collection, processing and compilation to ensure uniformity and comparability of industrial statistics produced by various entities in both government and private sectors. It provides an effective mechanism for the integration and aggregation of data being collected for decision-making and policy formulation. It serves as a basis in the construction of input-output (I-O) tables, and it provides a basis for anticipating the emergence of new industries.

**2. Scope of the 2009 PSIC**

Similar to the UN ISIC Rev. 4, the 2009 PSIC is a classification according to kind of economic activity. Thus, its scope has historically been restricted to the classification of units engaged in economic production as defined by System of National Accounts (SNA), which states: "Economic production is an activity, carried out under the responsibility, control and management of an

institutional unit, that uses inputs of labour, capital, and goods and services to produce outputs of goods and services” (ISIC Rev 4).

Although the scope of the present version of PSIC is defined by the productions boundary of the SNA, there is still one exception – activities in PSIC class 9820 (Undifferentiated **services**-producing activities of private households for own use.). This type of activity, in combination with class 9810 (Undifferentiated **goods**-producing activities of private households for own use), is used for measuring subsistence activities of households that can not otherwise be captured in the classification.

Class 9810 and 9820, however, cover only a part or subset of all household consumption, because households with clearly identifiable economic activities (whether market or for own final use) are classified in other parts of the 2009 PSIC. These categories have been created for special purposes, such as labor force surveys, to cover combinations of household activities that would otherwise be difficult or impossible to assign to a single PSIC category. These two categories are generally not used in business surveys in the country.

### **3. Summary of Classification Scheme**

The 2009 PSIC provides a Summary of Classification Scheme which presents a list of sections, divisions, and their corresponding number of groups, classes and sub-classes, and a Detailed Classification presenting the hierarchy of categories of industries such as:

- 21 sections (one-digit alphabetic codes)
- 88 divisions (2-digit codes)
- 245 groups (3-digit codes)
- 520 classes (4-digit codes)

The 2009 PSIC further enhances the relevance of the standard industrial classification by better reflecting the existing structure of the world economy, recognizing new industries that have emerged over the past 20 years and facilitating international comparison through increased comparability with existing regional classifications in the world. To account for these developments, the 2009 PSIC now consists of the following sections:

Section A – Agriculture, forestry and fishing  
Section B – Mining and quarrying  
Section C – Manufacturing  
Section D – Electricity, gas, steam and air-conditioning supply  
Section E – Water supply, sewerage, waste management and remediation activities  
Section F – Construction  
Section G – Wholesale and retail trade; repair of motor vehicles and motorcycles  
Section H – Transportation and storage  
Section I – Accommodation and food service activities

Section J – Information and communication  
 Section K – Financial and insurance activities  
 Section L – Real estate activities  
 Section M – Professional, scientific and technical services  
 Section N – Administrative and support service activities  
 Section O – Public administrative and defense; compulsory social security  
 Section P – Education  
 Section Q – Human health and social work activities  
 Section R – Arts, entertainment and recreation  
 Section S – Other service activities  
 Section T – Activities of private households as employers and undifferentiated goods and services and producing activities of households for own use  
 Section U – Activities of extraterritorial organizations and bodies

The 2009 PSIC provides substantially more detail at all levels than the previous version of the PSIC. It consists of 21 sections; 88 divisions, 245 groups, 520 classes, and 1,272 subclasses as compared to the 1994 PSIC which contains of 17 sections; 60 divisions, 159 groups and 292 classes. This increased detail responds to the emerging needs and data requirements of both data producers and data users.

#### **4. Criteria used in grouping the industrial activities**

All categories at each level of the 2009 PSIC are mutually exclusive. In establishing and determining the groups or classes of industrial activities, homogeneity was considered as a primary factor. To account for homogeneity, the major aspects of the activities considered were:

- (a) characteristics of the final goods and services produced
- (b) uses to which the goods and services were put
- (c) inputs, the process and the technology of production.

Another major consideration in delineating the groups or classes was the relative importance of the activities in the economy. In general, economic activities/industries with significant contributions to the economy are given separate codes and/or elevated to higher level of classification. Three (3) factors were considered in selecting the industries to be elevated or downgraded to another level of classification, namely:

- (a) highest value added
- (b) export winning capability
- (c) number of establishments engaged in an activity.

## **5. Major changes adopted in the 2009 PSIC**

The 2009 PSIC was patterned after the United Nations' International Standard Industrial Classification (ISIC) Revision 4.

To align the existing PSIC with the ISIC Rev. 4, the following major changes were adopted and incorporated in the 2009 PSIC.

### **Section A – Agriculture, forestry and fishing**

Major Divisions A (Agriculture, hunting and forestry) and B (Fishing) in the 1994 PSIC were combined to form Section A (Agriculture, forestry and fishing).

### **Section C – Manufacturing**

New divisions in manufacturing were created in the 2009 PSIC, such as Division 21 (Manufacture of pharmaceuticals, medicinal, chemical and botanical products) and Division 26 (Manufacture of computer, electronic and optical products). The scope of the latter differs from Division 30 (Manufacture of office, accounting and computing machinery) in the 1994 PSIC.

Most of the remaining divisions in Section C (Manufacturing) have no changes, except for Division 22 (Publishing, printing and reproduction of recorded media) and Division 37 (Recycling), which were transferred to Section J (Information and communication) and to Section E (Water supply; sewerage, waste management and remediation activities), respectively.

The repair and installation of machinery and equipment, which was formerly classified under the manufacturing of the corresponding type of equipment, is now separately identified in division 33 (Repair and installation of machinery and equipment) in Section C (Manufacturing) of the 2009 PSIC.

### **Section E - Water supply; sewerage, waste management and remediation activities**

A new Section E was created, which includes the “sanitation” activities (division 90) from Major Division O (Other community, social and personal service activities), the water collection and distribution activities (division 41) from Major Division E (Electricity, gas and water) and recycling (division 37) from Major Division D (Manufacturing) in the 1994 PSIC.

## **Section G – Wholesale and retail trade; repair of motor vehicles and motorcycles**

The repair of household goods (formerly Division 52 in the 1994 PSIC) was removed from Section G (Wholesale and retail trade; repair of motor vehicles and motorcycles) and transferred to Division 95 of Section S (Other service activities) in the 2009 PSIC. On the other hand, the repair of motor vehicles and motorcycles (formerly Division 50 in the 1994 PSIC) was retained as Division 45 of Section G in the 2009 PSIC, for comparability and continuity reasons

## **Section J – Information and Communication**

A new Section J (Information and communication) was created in the 2009 PSIC, combining the activities of the production and distribution of information and cultural products; the provision of the means to transmit or distribute these products, data or communications; information technology activities; the processing of data and other information service activities. The main components of this section are the following: (a) publishing activities (Division 58); (b) software publishing, motion picture and sound recording activities (Division 59); (c) radio and TV broadcasting and programming activities (Division 60); (d) telecommunication activities (Division 61); (e) information technology activities (Division 62); and (f) other information service activities (Division 63). These activities were previously under Major Division D (Manufacturing), Major Division I (Transport, storage and communications), and Major Division K (Real estate, renting and business activities) in the 1994 PSIC.

## **Section L – Real estate activities**

In the 1994 PSIC, Major Division K (Real estate, renting and business activities) was split up into three (3) sections. Real estate is now represented as a stand-alone section (Section L). The remaining activities were separated into Section M (Professional, scientific and technical activities) and Section N (Administrative and support service activities). Computer and related activities previously classified in Division 72 in the 1994 PSIC are no longer included in this section. Computer repair activities were grouped with repair of household goods in Section S (Other service activities) while software publishing and IT activities have been grouped in the new Section J (Information and communication).

## **Section P - Education**

The scope of education (Section P) was changed to explicitly include specialized sports (Class 8551), cultural education (Class 8552), other education (Class 8559), and educational support services (Class 8560).

## **Section Q - Human health and social work activities**

More details were created under Section Q, resulting in the creation of three (3) divisions instead of one in the 1994 PSIC. (1) Human health activities (Division 86); (2) Residential care activities (Division 87); and (3) Social work activities without accommodation (Division 88). Veterinary activities were deleted from this section and transferred as division (Division 75) in Section M (Professional, scientific and technical activities

### **6. Levels of detail or disaggregation of the industrial classification and coding system**

Similar to the 1994 PSIC as amended, the 2009 PSIC provides five (5) levels of disaggregation.

**First Level (Section)** – Sections are represented by one-digit capital letter codes.

**Second Level (Division)** – Sections are further disaggregated into more homogenous smaller groups called Divisions which are represented by two-digit numeric codes.

**Third Level (Group)** – Divisions are subdivided into more detailed aggregates called Groups which are represented by three-digit numeric codes.

**Fourth Level (Class)** – Groups are further subdivided into finer details or Classes which are represented by four-digit numeric codes.

**Fifth Level (Sub-class)** – Classes are divided into more specific categories or Subclasses with five-digit code numbers.

Concerned agencies are enjoined to adopt the 2009 PSIC. This memorandum circular shall take effect immediately.

## TECHNICAL NOTES

### 1. Purpose and Scope of the Classification

In the study of economic phenomena, taking all elements into account simultaneously is not always possible. For purposes of analysis, certain elements need to be chosen and grouped according to particular characteristics. Thus, all economic processes that are to be described in the form of statistics require systematic classification.

The Philippine Standard Industrial Classification (PSIC) is intended to be a standard classification of productive economic activities in the country. Its main purpose is to provide a set of activity categories that can be utilized for the collection and presentation of statistics according to such activities. Therefore, PSIC aims to present this set of activity categories in such a way that entities can be classified according to the economic activity they carry out. Defining the categories of PSIC is as much as possible linked with the way the economic processes are organized in units and the way this process is described in economic statistics.

PSIC is a classification according to kind of economic activity, and not a classification of goods and services. The activity carried out by a unit is the type of production in which it engages. This is the characteristic of the unit according to which it will be grouped with other units to form industries. An industry is defined as the set of all production units engaged primarily in the same or similar kinds of productive economic activity.

In principle, it is not possible to establish a one-to-one correspondence between activities and products. The PSIC is not designed to measure product data at any detailed level. It does not draw distinctions according to kind of ownership, type of legal organization or mode of operation because such criteria do not relate to the activity itself. Units engaged in the same kind of activity are classified in the same category of PSIC, irrespective of whether they are part of incorporated enterprises, individual proprietors or government, and whether or not the parent enterprise consists of more than one establishment. Similarly, manufacturing units are classified according to the principal kind of economic activity in which they engage, whether the work is performed by power-driven machinery or by hand, or whether it is done in a factory or in a household.

The 2009 PSIC covers all economic activities grouped accordingly in the following 21 sections: (a) agriculture, forestry and fishing; (b) mining and quarrying; (c) manufacturing; (d) electricity, gas, steam and air-conditioning supply; (e) water supply; sewerage, waste management and remediation activities; (f) construction; (g) wholesale and retail; repair of motor vehicles and motorcycles; (h) transportation and storage; (i) accommodation and food service activities; (j) information and communication; (k) financial and insurance activities; (l) real estate activities; (m) professional, scientific and technical activities; (n) administrative and support service activities; (o) public administration and defense; compulsory social security; (p) education; (q) human health and social work activities; (r) arts, entertainment and recreation; (s) other service activities; (t) activities of households as employers; undifferentiated goods-and-services-producing activities of households for own use; and (u) activities of extraterritorial organizations and bodies. It takes into account changes in the relative importance and organization of various types of

economic activities that have taken place since 2002 or for the last seven years. Careful attention has been given to the emerging potential industries which, though in the process of development, are expected to be stable and to play an important role in the economy within the immediate future.

## **2. Criteria for Grouping**

This 2009 PSIC made use of the International Standard Industrial Classification Revision 4 issued by the United Nations Statistics Division as the main reference and basis in order to meet international comparability. Consistency with the structure of ISIC has been maintained as far as being practicable with some modifications introduced to reflect national situation and requirements. Such modifications involved: a) further subdivision of certain ISIC groups (3-digit categories) and classes (4-digit categories), and providing separate codes for industries of importance to the national economy; (b) upgrading important industry groups or classes to higher levels of classification and downgrading those that contribute insignificantly to the national economy; and (c) extension of the classification to five-digit level by further subdividing the classes into subclasses.

As in the 1994 PSIC and ISIC, Rev. 3, the characteristics of the economic activities of the producing units were given primary consideration in delineating the groups of the 2009 PSIC. These are: a) the nature of the goods and services produced, b) the uses to which the goods and services are put, and c) the inputs, the process, and the technology of production. Attention was also given to the usual combination of economic activities customarily carried out under the same ownership or control, differences in scale and organization of activities, and the relative importance of the activities in the national economy. The latter was the major consideration in elevating certain groups or classes to higher levels of classification.

In applying the nature of the goods and services produced as a criterion, account was taken of the physical composition and stage of fabrication of the items and the needs served by them. The nature of goods and services produced provided the basis for grouping producing units according to similarities in, and links between, the raw materials consumed, and sources of demand and markets for the items produced. The criterion relating to the economic agents, (e.g., producers, financial institutions, households, etc.) and the purpose to which the goods and services are disposed of (e.g., intermediate consumption, capital formation, final consumption and the like) reinforce the first criterion regarding the stage of fabrication of, and the needs served by these items. This second criterion enhances the value of the PSIC in distinguishing producing units according to sources of demand and markets for their output and in tracing the ties among producing units, and between them and the rest of the economy. The third criterion relating to the process, technology and organization of production reinforces the consideration for grouping producing units according to degrees of similarity in cost-structure, relative magnitude of fixed capital and labor employed, and relative productivity and scale of operations.

The manner in which activities are combined and allocated among establishments and the relative importance of the economic activities in the national economy were the main criteria used in defining the classes and subclasses of the present edition of PSIC. The former criterion ensures that the units falling into each class or subclass will be as similar as feasible in the kinds of economic activity they are engaged in. The latter criterion (relative importance of economic activities) is designed to ensure that the resulting classification reflects the local conditions and requirements. In general, separate classes and subclasses were provided for activities that significantly contribute to the national

economy based on the following criteria: a) value of production, b) number of establishments engaged in the activity; and c) export winning capability.

The classes and subclasses of the 2009 PSIC were defined such that as far as possible the following conditions were met: a) the production of the category of goods and services which characterizes a given class/subclass accounts for the bulk of the output of the corresponding production units and b) the class contains the units which produce most of the categories of goods and services which characterize it. The first condition is required in order that the units included in a given class/subclass will be homogeneous or as similar to each other as possible. The second condition reinforces the first condition. These two conditions set the limit to the detail of the classification since classes and subclasses must be defined in terms of the usual combination of activities customarily engaged in by the establishments.

### 3. Statistical Units of Classification

The unit classified in an industrial classification is not the product but the production organization which could be an establishment, an enterprise or a firm, a household or an activity unit. While different statistical units are used depending on the kind of statistics to be collected, the ideal statistical units of classification should meet the following requirements: a) homogeneity in terms of economic activity, b) separate data on its activities are available and can be compiled meaningfully, and c) it has some degree of autonomy. Autonomy must not be taken to be absolute. For example, if a unit or its management is allowed to set its own goals and to buy and sell freely at the market, it is perceived as a distinct unit.

The following are the different types of statistical units:

- a) *Establishment-type* unit is defined as a recognizable economic unit under a single ownership or control, i.e., under a single legal entity, which engages in one or predominantly one kind of economic activity at a single physical location.
- b) The *kind-of-activity unit* is an enterprise or part of an enterprise which engage in one or predominantly one kind of economic activity without being restricted to the geographic area in which that activity is carried out. *Kind-of-activity unit* differs from establishments in that there is no restriction in respect of geographic area, i.e., it can be heterogeneous concerning its location.
- c) The *technical unit* can be a section or department of the establishment which engages directly in the production of the class of goods made, or services rendered, by an establishment, or in a stage in the production of these goods and services. Sections or departments of meat packing plants which produce lard, cured bacon or canned meat (i.e., horizontally integrated) are examples of the former type of technical units. The departments of a textile mill which spin yarn, weave cloth, etc., (vertically integrated) are examples of the latter type of technical units.
- d) *Local unit* covers all economic activities carried out by an enterprise from one location. Local units differ from establishments in that they may be heterogeneous in its economic activities. The main requirements are that it falls under one ownership and must be at one location.

- e) The *ancillary unit* provides non-durable goods or services primarily or entirely, for the use of the parent producing unit(s). These goods and services do not become a physical part of the output of parent units and are customarily provided as subsidiary and supporting activities for establishments of the same enterprise. The following types of units are not to be considered ancillary units but should be treated as separate establishments to be classified to their own activity if separate data on their activities are available.
- i. Units producing goods or doing work which are part of fixed capital formation
  - ii. Units which, in addition to producing goods or services for the use of their parent unit, sell a significant portion of their product or service to others; and,
  - iii. Units producing goods which become physical part of the output of the parent unit, e.g., making boxes, tin cans or the like, by a department of an enterprise packaging its own products.

Examples of ancillary units are the central administration offices, warehouses, garage, repair shops or electric power plants which primarily serve other establishments of the same enterprise.

- f. The *enterprise-type unit* is a legal entity or family of legal entities that encloses and directly or indirectly controls all necessary functions to carry out its economic activities. The former may be a corporation, a joint stock company, a cooperative association, incorporated non-profit association, partnership, individual proprietorship and the like. The latter, i.e., family of legal entities, consists of a group or combination of entities which are owned or controlled by the same interest. Thus, the main requirement of this unit is that it has one ownership or control. It can, however, be heterogeneous with respect to its economic activity as well as its location.

#### 4. Some Rules in the Classification of Statistical Units

##### 4.1 General rule

In general, the activity classification of a statistical unit is determined from its principal activity or range of activities. Secondary activities are not to be considered when classifying a unit. The principal activity of the unit in general can usually be determined from the goods that it sells or ships or the services that it renders to other units or consumers. However, the descriptions and explanatory notes of the individual classes in PSIC should be used to determine the activities carried out in terms of PSIC categories, using not only the output structure but also the input structure and the production process. Ideally, the principal activity should be determined with reference to the value added of the goods sold or the services rendered. In practice, however, it is often impossible to obtain the information on value added of the different activities. In such case, the principal activity should be determined by using substitute criteria such as:

- (1) *Substitutes based on output, such as :*

1.1 The gross output of the unit that is attributable to the goods and services associated with each activity;

1.2 The value of sales or shipments of those groups of products falling into each category of activity.

(2) *Substitutes based on input, such as:*

2.1 Wages and salaries attributable to the different activities;

2.2. Hours worked attributable to the different activities;

2.3 Employment according to the proportion of people engaged in the different activities of the unit.

#### 4.2 Treatment of independent multiple activities

If a unit is engaged in several types of independent activities but cannot itself be segregated into separate statistical units (when, for example, manufacture of bakery products is combined with manufacture of chocolate confectionery), the unit should be classified in PSIC class with the largest share of value added by using the “top-down method. In this case, the appropriate highest classification (one-digit) level should be determined first, then the succeeding two-digit (division) and three-digit (group) levels and finally the four-digit (class) or five-digit (subclass) level.

#### 4.3 Treatment of vertical integration

Vertical integration of activities occurs wherever the different stages of production are carried out in succession by the same unit and the output of one process serves as input to the next. A unit should be classified in the class indicated by the nature of its final products unless the context of a specific category requires otherwise. For example, mining of clay combined with brickworks should be classified to brick making and the felling of timber trees combined with saw-milling is classified to saw-milling.

#### 4.4 Repair and maintenance

The PSIC now provides separate categories for the repair of all kinds of goods. However, no single high-level category exists that would cover all repair activities. Based on the type of goods repaired, the activities are classified as follows: (1) Repair of motor vehicles and of motorcycles are classified in classes 4520 and 4540, respectively; (2) Repair of computers and communication equipment is classified in group 951; (3) Repair of personal and household goods is classified in group 952; (4) Repair of other machinery and equipment is classified in group 331 and (5) Repair of buildings and other structures is classified in division 43.

#### 4.5 Outsourcing/activities on a fee or contract basis

In some cases, units sell goods or services under their own name but the actual production, such as the physical transformation process in the case of

manufacturing, is carried out fully or in part by others through specific contractual arrangements. This section describes how units involved in such arrangements should be classified in PSIC.

The following terminology is applied :

- (a) The *principal* is a unit that enters in a contractual relationship with another unit (contractor) to carry out some part (or all) of the production process;
- (b) The *contractor* is a unit that carries out a specific production process based on a contractual relationship with a principal. The activities performed by the contractor are denominated “on free or contract basis”;
- (c) *Outsourcing* is a contractual agreement according to which the principal requires the contractor to carry out a specific production process. The “subcontracting” is sometimes used as well. Production process also includes supporting activities.

## **5. Structure and Coding System**

The 2009 PSIC provides substantially more details at all levels compared with the 1994 PSIC. Creation of more categories at the highest level (section level) was done especially for service activities. The use of capital letters for coding the sections was continued in order to avoid having to change the PSIC coding structure.

The five levels of disaggregation are maintained, however there was a change in the nomenclature of the levels. The first level of disaggregation (identified by letters) formerly designated as *major division* is now called the *section*. The sections are assigned capital letters, the Arabic numbers assigned to a given category of PSIC may be read as follows: the first and second digits taken together, indicate the *division* in which the category is included; the first three digits identify the *group*; the fourth digits identify the *class* and all the five digits indicate the *subclass*. The 2009 PSIC comprises of 21 sections, which are then further subdivided into a total of 88 divisions, 245 groups, 520 classes and 1,271 subclasses. The hierarchy of classification are: section, division, group, class and subclass.

## **6. Major changes adopted in the 2009 PSIC**

The 2009 PSIC was patterned after the United Nations’ International Standard Industrial Classification (ISIC) Revision 4.

To align the existing PSIC with the ISIC Rev. 4, the following major changes were adopted and incorporated in the 2009 PSIC.

### **Section A – Agriculture, forestry and fishing**

Major Divisions A (Agriculture, hunting and forestry) and B (Fishing) in the 1994 PSIC were combined to form Section A (Agriculture, forestry and fishing).

### **Section C – Manufacturing**

New divisions in manufacturing were created in the 2009 PSIC, such as Division 21 (Manufacture of pharmaceuticals, medicinal, chemical and botanical products) and Division 26 (Manufacture of computer, electronic and optical products). The scope of the latter differs from Division 30 (Manufacture of office, accounting and computing machinery) in the 1994 PSIC. Other new divisions, such as division 11 (Manufacture of beverages) and division 31 (Manufacture of furniture) resulted from splitting existing divisions and thus elevating their components to the division level which in the 1994 PSIC existed at the group level.

Most of the remaining divisions in Section C (Manufacturing) have no changes, except for Division 22 (Publishing, printing and reproduction of recorded media) and Division 37 (Recycling), which are now transferred to Section J (Information and communication) and Section E (Water supply; sewerage, waste management and remediation activities), respectively.

The repair and installation of machinery and equipment, formerly classified under the manufacturing of the corresponding type of equipment, is now separately identified in division 33 (Repair and installation of machinery and equipment) in Section C (Manufacturing) of the 2009 PSIC.

#### **Section E - Water supply; sewerage, waste management and remediation activities**

A new Section E was created, consisting of: (a) the “sanitation” activities (division 90) from Major Division O (Other community, social and personal service activities), (b) the water collection and distribution activities (division 41) from Major Division E (Electricity, gas and water) and (c) recycling (division 37) from Major Division D (Manufacturing) in the 1994 PSIC.

#### **Section G – Wholesale and retail trade; repair of motor vehicles and motorcycles**

The repair of household goods (formerly Division 52 in the 1994 PSIC) was removed from Section G (Wholesale and retail trade; repair of motor vehicles and motorcycles) and transferred to Division 95 of Section S (Other service activities) in the 2009 PSIC. On the other hand, the repair of motor vehicles and motorcycles (formerly Division 50 in the 1994 PSIC) is retained as Division 45 of Section G in the 2009 PSIC, for comparability and continuity reasons

#### **Section J – Information and Communication**

A new Section J (Information and communication) was created in the 2009 PSIC, combining the following: (a) activities of the production and distribution of information and cultural products, (b) provision of the means to transmit or distribute these products, data or communications, (c) information technology activities, and (d) processing of data and other information service activities. The main components of this section are the following: (a) publishing activities (Division 58), (b) software publishing, motion picture and sound recording activities (Division 59), (c) radio and TV broadcasting and programming activities (Division 60), (d)

telecommunication activities (Division 61), (e) information technology activities (Division 62), and (f) other information service activities (Division 63). These activities were previously under Major Division D (Manufacturing), Major Division I (Transport, storage and communications), and Major Division K (Real estate, renting and business activities) in the 1994 PSIC.

### **Section L – Real estate activities**

In the 1994 PSIC, Major Division K (Real estate, renting and business activities) was split up into three (3) sections. Real estate is now represented as a stand-alone section (Section L). The remaining activities were separated into Section M (Professional, scientific and technical activities) and Section N (Administrative and support service activities). Computer and related activities previously under Division 72 in the 1994 PSIC are no longer included in this section. Computer repair activities were grouped with repair of household goods in Section S (Other service activities) while software publishing and IT activities were grouped in the new Section J (Information and communication).

### **Section P - Education**

The scope of education (Section P) was changed to explicitly include specialized sports (Class 8551), cultural education (Class 8552), other education (Class 8559), and educational support services (Class 8560).

### **Section Q - Human health and social work activities**

More details were created under Section Q, resulting in the creation of three (3) divisions instead of one in the 1994 PSIC. (1) Human health activities (Division 86); (2) Residential care activities (Division 87); and (3) Social work activities without accommodation (Division 88). Veterinary activities were deleted from this section and transferred as division (Division 75) in Section M (Professional, scientific and technical activities).

## DIVISION 02. FORESTRY AND LOGGING

This division includes the production of roundwood for the forest-based manufacturing industries (Division 16 & 17) as well as the extraction and gathering of wild growing non-wood forest products. Besides the production of timber, forestry activities result in products that undergo little processing such as fire wood, charcoal, wood chips and roundwood used in an unprocessed form (e.g. pit-props, pulpwood, etc.). These activities can be carried out in natural or planted forests.

Silviculture and other forestry activities

This class includes :

Growing of standing timber : planting, replanting, transplanting, thinning and conserving of forests and timber tracts

Growing of coppice, pulpwood and fire wood

Operation of forest tree nurseries

planted forests.

*This class excludes :*

*Growing of Christmas tree, see 0129;*

*Gathering of wild growing non-wood forest products,*

*Production of wood chips and particles, see 1610.*

## SECTION B. MINING AND QUARRYING

This sections includes the extraction of minerals occurring naturally as solids (coal and ores), liquids (petroleum) or gases (natural gas). Extraction can be achieved by different methods such as underground or surface mining, well operation, seabed mining, etc. This section also includes supplementary activities aimed at preparing the crude materials for marketing, for example, crushing, grinding, cleaning, drying, sorting, concentrating ores, liquefaction of natural gas and agglomeration of solid fuels.

### DIVISION 05. MINING OF COAL AND LIGNITE

This division includes the extraction of solid mineral fuels includes through underground or open-cast mining and includes operations (e.g. grading, cleaning, compressing and other steps necessary for transportation etc.) leading to a marketable product.

*This division excludes coking (see 1910), services incidental to coal or lignite mining (see 0990) or the manufacture of briquettes (see 1920).*

## SECTION C. MANUFACTURING

Manufacturing includes the physical or chemical transformation of materials, substances, or components into new products. The raw materials are products of agriculture, forestry, fishing, mining or quarrying as well as products of other manufacturing activities. Substantial alteration, renovation or reconstruction of goods is generally considered as manufacturing.

Manufacturing units are described as plants, factories or mills and characteristically use power-driven machines and materials-handling equipment. Units that transform materials into new products by hand, in the worker's home, or sell products made on the same premises from which they are sold are also included here. Manufacturing units may process materials or may contract with other units to process their materials for them. Both types of units are included in manufacturing.

### DIVISION 10. MANUFACTURE OF FOOD PRODUCTS

This division includes the processing of the product of agriculture, forestry and fishing into human or animals food, and includes intermediate products that are not directly food products and may be of greater or lesser value. This division is organized by activities dealing with different kinds of food products. Production can be carried out for own account or by third party. Some activities are considered manufacturing even though there is retail sale of the products in the producer's own shop. However, where the processing is minimal and does not lead to a real transformation, the unit is classified to Wholesale and retail trade (Section G).

### DIVISION 13. MANUFACTURE OF TEXTILES

This division includes preparation and spinning of textile fibers, weaving and finishing of textiles and wearing apparel, manufacture of made-up textile articles, except apparel (e.g. household linen, blankets, rugs, cordage etc.).

*This division excludes the growing of natural fibres or the manufacture of synthetic fibres and manufacture of wearing apparel.*

131

Spinning, weaving and finishing of textiles

This group includes preparatory operations, spinning, weaving and finishing of textiles and the weaving of textiles. This can be done from varying raw materials, such as silk, wool, other animal, vegetable or manmade fibers, paper or glass etc. Also included is the finishing of textiles and wearing apparel such as bleaching, dyeing, and similar activities.

1311

Preparation and spinning of textile fibers

This class includes :

Preparatory operations on textile fibers: reeling and washing of silk; degreasing and carbonizing of wool and dyeing of wool fleece; carding and combing of all kinds of animal, vegetable and man-made fibers

Spinning and manufacture of yarn or thread for weaving or sewing, for the trade or for further processing :

Texturizing, twisting, folding, cabling and dipping of synthetic or artificial filament yarns

Manufacture of paper yarn

*This class excludes :*

*Preparatory operations carried out in combination with agriculture or farming, see 01;*

*Retting of plants bearing vegetable textile fibres (jute, flax, coir etc.), see 0116;*

*Cotton ginning, see 0163;*

*Manufacture of synthetic or artificial fibres and tows, manufacture of single yarns (including high tenacity yarn and yarn for carpets) of synthetic or artificial fibres, see 2030;*

### **DIVISION 15. MANUFACTURE OF LEATHER AND RELATED PRODUCTS**

This division includes the transformation of hides into leather by tanning or curing and fabricating the leather into products for final consumption. It also includes the manufacture of similar products from other materials (imitation leathers or leather substitutes) such as rubber footwear, textile luggage etc. The products made from leather substitutes are included here, since they are made in ways similar to those in which leather products are made (e.g. luggage) and are often produced in the same unit.

**DIVISION 16. MANUFACTURE OF WOOD AND OF PRODUCTS OF WOOD AND CORK, EXCEPT FURNITURE; MANUFACTURE OF ARTICLES OF BAMBOO, CANE, RATTAN AND THE LIKE; MANUFACTURE OF ARTICLES OF STRAW AND PLATING MATERIALS**

This division includes the manufacture of wood products, mostly used for construction, and includes various processes from sawing, to shaping and assembling of wood products, and assembling into finished products, such as wood containers. With the exception of sawmilling, this division is subdivided mainly based on the specific products manufactured.

*This does not include the manufacture of furniture, or the installation of wooden fittings and the like.*

161 1610

Sawmilling and planing of wood

This class includes :

Sawing, planing and machining of wood

Slicing, peeling or chipping logs

Manufacture of wooden railway sleepers

Manufacture of unassembled wood flooring including parquet flooring

#### **DIVISION 17. MANUFACTURE OF PAPER AND PAPER PRODUCTS**

This division includes the manufacture of pulp, paper and converted paper products. The manufacture of these products is grouped together because they constitute a series of vertically connected processes. More than one activity is often carried out in a single unit. There are essentially three activities : (a) The manufacture of pulp involves separating the cellulose fibers from other impurities in wood or used paper (b) The manufacture of paper involves matting these fibers into a sheet and (c) Converted paper products are made from paper and other materials by various cutting and shaping techniques, including costing and laminating activities. The paper articles may be printed (e.g. wallpaper, gift wrap etc.), as long as the printing of information is not the main purpose.

The production of pulp, paper and paperboard in bulk is included in class 1701, while the remaining classes include the production of further-processed paper and paper products.

## DIVISION 18. PRINTING AND REPRODUCTION OF RECORDED MEDIA

This division includes printing of products, such as newspapers, books, periodicals, business forms, greeting cards, and other materials, and associated support activities, such as bookbinding, plate-making services, and data imaging. The support activities included here are an integral part of the printing industry, and a product (a printing plate, a bound book, or a computer disk or file) that is an integral part of the printing industry is almost always provided by these operations.

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		Processes used in printing include a variety of methods for transferring an image from a plate, screen, or computer file to a medium, such as paper, plastics, metal, textile articles, or wood. The most prominent of these methods entails the transfer of the image from a plate or screen to the medium through lithographic, gravure, screen or flexographic printing. Often a computer file is used to directly "drive" the printing mechanism to create the image or electrostatic and other types of equipment (digital or non impact printing).			
		Though printing and publishing can be carried out by the same unit (a newspaper, for example), it is less and less the case that these distinct activities are carried out in the same physical location.			
		This division also includes the reproduction of recorded media, such as compact discs, video recordings, software on discs or tapes, records, etc.			
181		Printing and service activities related to printing			
		This group includes printing of products, such as newspapers, books, periodicals, business forms, greeting cards, and other materials, and associated support activities, such as bookbinding, plate-making services, and data imaging. Printing can be done using various techniques and on different materials.			
1811	18110	Printing	D22210	1811	181
		This class includes :			
		Printing of newspapers, magazines and other periodicals, books and brochures, music and music manuscripts, maps, atlases, posters, advertising catalogues, prospectuses and other printed advertising, postage stamps, taxation stamps, documents of title, cheques and other security papers, registers, albums, diaries, calendars, business forms and other commercial printed matter, personal stationery and other printed matter by letterpress, offset, photogravure, flexographic and other printing presses, duplication machines, computer printers, embossers, etc., including quick printing.			
		Printing directly into textiles, plastic, glass, metal, wood and ceramics (except silk-screen printing on textiles and wearing apparel).			
		The material printed is typically copyrighted.			
		This class also includes :			
		Printing on labels or tags (lithographic, gravure printing, flexographic printing, others).

## **DIVISION 19. MANUFACTURE OF COKE AND REFINED PETROLEUM PRODUCTS**

This division includes the transformation of crude petroleum and coal into usable products. The dominant process is petroleum refining which involves the separation of crude petroleum into component products through such techniques as cracking and distillation. This division also includes the manufacture for own account of characteristic products (e.g. coke, butane, propane, petrol, kerosene, fuel oil etc.) as well as processing services (e.g. custom refining).

This division includes the manufacture of gases such as ethane, propane and butane as products of petroleum refineries.

*This division excludes the manufacture of such gases in other units (2011), manufacture of industrial gases (2011), extraction of natural gas (methane, ethane, butane or propane) (0600), and manufacture of fuel gas, other than petroleum gases (e.g. coal gas, water gas, producer gas, gasworks gas (35420).*

The manufacture of petrochemicals from refined petroleum is classified in Division 20.

### **DIVISION 23. MANUFACTURE OF OTHER NON-METALLIC MINERAL PRODUCTS**

This division includes manufacturing activities related to a single substance of mineral origin. This division includes the manufacture of glass and glass products (e.g. flat glass, hollow glass, fibres, technical glassware, etc.), ceramic products, tiles and baked clay products, and cement and plaster, from raw materials to finished articles. The manufacture of shaped and finished stone and other mineral products is also included in this division.

## DIVISION 24. MANUFACTURE OF BASIC METALS

This division includes the activities of smelting and/or refining ferrous and non-ferrous metals from ore, pig or scrap, using electrometallurgic and other process metallurgic techniques. This division also includes the manufacture of metal alloys and super-alloys by introducing other chemical elements to pure metals. The output of smelting and refining, usually in ingot form, is used in rolling, drawing and extruding operations to make products, such as plate, sheet, strip, bars, rods, wire, tubes, pipes and hollow profiles, and in molten form to make castings and other basic metal products.

241

Manufacture of basic iron and steel

This class includes operations of conversion by reduction of iron ore in blast furnaces and oxygen converters or of ferrous waste and scrap in electric arc furnaces or by direct reduction of iron ore without fusion to obtain crude steel which is smelted and refined in a ladle furnace and then poured and solidified in a continuous caster in order to produce semi-finished flat or long products, which are used, after reheating, in rolling, drawing and extruding operations to manufacture finished products such as plate, sheet, strip, bars, rods, wire, tubes, pipes and hollow profiles.

This class includes :

Operation of blast furnaces, steel converters, rolling and finishing mills

Production of pig iron and spiegeleisen in pigs, blocks or other primary forms

Production of ferro-alloys

Production of ferrous products by direct reduction of iron and other spongy ferrous products

Production of iron of exceptional purity by electrolysis or other chemical processes

Production of granular iron and iron powder

Production of steel in ingots or other primary forms

Remelting of scrap ingots of iron or steel

### DIVISION 25. MANUFACTURE OF FABRICATED METAL PRODUCTS, EXCEPT MACHINERY AND EQUIPMENT

This division includes the manufacture of "pure" metal products (such as parts, containers and structures), usually with a static, immovable function, as opposed to the following divisions 26-30 which cover the manufacturing of combinations or assemblies of such metal products (sometimes with other materials) into more complex units that unless they are purely electrical, electronic or optical, work with moving parts. The manufacture of weapons and ammunition is also included in this division.

*This division excludes :*

*Specialized repair and maintenance activities, see group 331;*

*Specialized installation of manufactured goods produced in this division in buildings, such as central heating boilers, see 4322.*

## DIVISION 26. MANUFACTURE OF COMPUTER, ELECTRONIC AND OPTICAL PRODUCTS

This division includes the manufacture of computers, computer peripherals, communications equipment, and similar electronic products, as well as the manufacture of components for such products. Production processes of this division are characterized by the design and use of integrated circuits and the application of highly specialized miniaturization technologies.

The division also contains the manufacture of consumer electronics, measuring, testing, navigating, and control equipment, irradiation, electromedical and electrotherapeutic equipment, optical instruments and equipment and the manufacture of magnetic and optical media.

261

Manufacture of electronic components

This class includes :

Manufacture of electron tubes

Manufacture of capacitors, electronic

Manufacture of resistors, electronic

Manufacture of microprocessors

Manufacture of bare printed circuit boards

Manufacture of electronic connectors

Manufacture of integrated circuits (analog, digital or hybrid)

Manufacture of diodes, transistors, and related discrete devices

Manufacture of inductors (e.g. chokes, coils, transformers), electronic component type

Manufacture of electronic crystals and crystal assemblies

Manufacture of solenoids, switches, and transducers for electronic applications

Manufacture of dice or wafers, semiconductor, finished or semi-finished

		<p>This includes the manufacture and/or assembly of various electronic computers, and computer peripheral equipment, such as storage devices and input/output devices (printers, monitors, keyboards). Computers can be analog, digital, or hybrid. Digital computers, the most common type, are devices that do all the following : (1) store the processing program or programs and the data immediately necessary for the execution of the program, (2) can be freely programmed in accordance with the requirements of the user, (3) perform arithmetical computations specified by the user and (4) execute, without human intervention, a processing program that requires the computer to modify its execution by logical decision during the processing run. Analog computers are capable of simulating mathematical models and comprise at least analog control and programming elements</p> <p>This class includes :</p> <p>Manufacture of desktop computers</p> <p>Manufacture of laptop computers</p> <p>Manufacture of main frame computers</p> <p>Manufacture of hand-held computers (e.g. PDA)</p> <p>Manufacture of magnetic disk drives, flash drives and other storage devices</p> <p>Manufacture of optical (e.g. CD-RW, CD-ROM, DVD-ROM, DVD-RW) disk drive</p> <p>Manufacture of printers</p> <p>Manufacture of monitors</p> <p>Manufacture of keyboards</p> <p>Manufacture of all types of mice, joysticks and trackball accessories</p> <p>Manufacture of dedicated computer terminals</p> <p>Manufacture of computer servers</p> <p>Manufacture of scanners, including bar code scanners</p> <p>Manufacture of smart card readers</p> <p>Manufacture of virtual reality helmets</p> <p>Manufacture of computer projectors (video beamers)</p> <p>Manufacture of computer terminals, like automatic teller machines (ATM's), point-of-sale (POS) terminals, not mechanically operated</p>

**DIVISION 28. MANUFACTURE OF  
MACHINERY AND EQUIPMENT, N.E.C.**

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		<p>This division includes the manufacture of machinery and equipment that act independently on materials either mechanically or thermally or perform operation on materials (such as handling, spraying, weighing or packing), including their mechanical components that produce and apply force, and any specially manufactured primary parts. This category includes fixed and mobile or hand-held devices, regardless of whether they are designed for industrial, building and civil engineering , agricultural or home use. The manufacture of special equipment for passenger or freight transport within demarcated premises also belongs within this division.</p> <p>This division also includes other special purpose machinery, not covered elsewhere in the classification, whether or nor used in a manufacturing process, such as fairground amusement equipment, automatic bowling alley equipment, etc.</p> <p><i>This division excludes the manufacture of metal products for general use (division 25), associated control devices, computer equipment, measurement and testing equipment, electricity distribution and control apparatus (divisions 26 and 27) and general-purpose motor vehicles (divisions 29 and 30).</i></p>			
281		<p>Manufacture of general purpose machinery</p> <p>This group includes the manufacture of general-purpose machinery, i.e. machinery that is being used in a wide range of PSIC industries. This can include the manufacture of components used in the manufacture of a variety of other machinery or the manufacture of machinery that support the operation of other businesses</p>			
2811		<p>Manufacture of engines and turbines, except aircraft, vehicle and cycle engines</p> <p>This class includes :</p> <p>Manufacture of internal combustion piston engines, except motor vehicle, aircraft and cycle propulsion engines: marine engines, railway engines</p> <p>Manufacture of pistons, piston rings, carburetors and such for all internal combustion engines, diesel engines, etc.</p> <p>Manufacture of inlet and exhaust valves of internal combustion engines</p> <p>Manufacture of turbines and parts thereof: steam turbines and other vapour turbines, hydraulic turbines, waterwheels and regulators thereof, wind turbines, gas turbines, except turbo jets or turbo propellers for aircraft propulsion</p>

2822		Manufacture of metal-forming machinery and machine tools			
		This class includes :			
		Manufacture of machine tools for working metals and other materials (wood, bone, stone, hard rubber, hard plastic, cold glass, etc.), including those using a laser beam, ultrasonic waves, plasma arc, magnetic pulse etc.			
		Manufacture of machine tools for turning, drilling, milling, shaping, planning, boring, grinding, etc.			
		Manufacture of stamping or pressing machine tools			
		Manufacture of punch presses, hydraulic presses, hydraulic brakes, drop hammers, forging machines, etc.			
		Manufacture of draw-benches, thread rollers or machines for working wires			
		Manufacture of stationary machines for nailing, stapling, glueing or otherwise assembling wood, cork, bone, hard rubber or plastics, etc.			
		Manufacture of stationary rotary or rotary percussions drills, filing machines, riveters, sheet metal cutters etc.			
		Manufacture of presses for the manufacture of particle board and the like			
		Manufacture of electroplating machinery			
		This class also includes the manufacture of parts and accessories for the machine tools listed above: work holders, dividing heads and other special attachments for machine tools			
		<i>This class excludes :</i>			
		<i>Manufacture of interchangeable tools for hand tools or machine tools (drills, punches, dies, taps, milling cutters, turning tools, saw blades, cutting knives, etc., see 2593;</i>			
		<i>Manufacture of electric hand-held soldering irons and soldering guns, see 2790;</i>

2823	28230	Manufacture of machinery for metallurgy	D29230 part	2823	282
		This class includes :			
		Manufacture of machines and equipment for handling hot metals : converters, ingot moulds, ladles, casting machines			
		Manufacture of metal-rolling mills and rolls for such mills			
		<i>This class excludes :</i>			
		<i>Manufacture of draw-benches, see 2822;</i>			
		<i>Manufacture of moulding boxes and moulds (except ingot moulds), see 2593;</i>			
		<i>Manufacture of machines for forming foundry moulds, see 2829.</i>			
2824		Manufacture of machinery for mining, quarrying and construction			
		This class includes :			
		Manufacture of continuous-action elevators and conveyors for underground use			
		Manufacture of boring, cutting, sinking and tunneling machinery (whether or not for underground use)			
		Manufacture of machinery for treating minerals by screening, sorting, separation, washing, crushing, etc.			
		Manufacture of concrete and mortar mixers			
		Manufacture of earth-moving machinery: bulldozers, angle-dozer, graders, scrapers, lavellers, mechanical shovels, shovel loaders, etc.

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		Manufacture of presses, crushers, etc. used to make wine, cider, fruit juices, etc.			
		Manufacture of machinery for the bakery industry or for making macaroni, spaghetti or similar products : bakery ovens, dough mixers, dough-dividers, moulders, slicers, cake depositing machines, etc.			
		Manufacture of machines and equipment to process diverse foods :			
		machinery to make confectionary, cocoa or chocolate; to manufacture sugar; for breweries; to process meat or poultry, to prepare fruit, nuts or vegetables; to prepare fish, shellfish or other seafood			
		machinery for filtering and purifying			
		other machinery for the industrial preparation or manufacture of food or drink			
		Manufacture of machinery for the extraction or preparation of animal or vegetable fats or oils			
		Manufacture of machinery for the preparation of tobacco and for the making of cigarettes or cigars, or pipe or chewing tobacco or snuff			
		Manufacture of machinery for the preparation of food in hotels and restaurants.			
		<i>This class excludes :</i>			
		<i>Manufacture of food and milk irradiation equipment, see 2660;</i>			
		<i>Manufacture of packing, wrapping and weighing machinery, see 2819;</i>

2826		Manufacture of machinery for textile, apparel and leather production			
		<i>This class includes :</i>			
		Manufacture of textile machinery :			
		machines for preparing, producing, extruding, drawing, texturizing or cutting man-made textile			

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		machines for preparing textile fibres: cotton gins, bale breakers, ginneries, cotton spreaders, wool scouters, wool carbonizers, combs, carders, roving frames. etc.			
		spinning machines			
		machines for preparing textile yarns: reelers; warpers and related machines			
		weaving machines (looms), including hand looms			
		knitting machines			
		machines for making knotted net, tulle, lace, braid, etc.			
		Manufacture of auxiliary machines or equipment for textile machinery: dobbies, jacquards, automatic stop motions, shuttle changing mechanisms, spindlers and spindle flwers. etc.			
		Manufacture of textile printing machines			
		Manufacture of machinery for fabric processing :			
		machinery for washing, bleaching, dyeing, dressing, finishing, coating or impregnating textile fabrics			
		manufacture of machines for reeling, unreeling, folding, cutting or pinking textile fabrics;			
		Manufacture of laundry machinery :			
		ironing machines, including fusing presses			
		commercial washing and drying machines			
		dry-cleaning machines			
		Manufacture of sewing machines, sewing machine heads and sewing machine needles (whether or not for household use)			
		Manufacture of machines for producing or finishing felt or non-wovens			
		Manufacture of leather machines :			
		machinery for preparing, tanning or working hides, skins or leather			
		machinery for making or repairing footwear or other articles of hides, skins, leather or fur skins			
		<i>This class excludes :</i>			
		<i>Manufacture of paper or paperboard cards for use on jacquard machines, see 1709;</i>

		This class includes the manufacture of special-purpose machinery not elsewhere classified.			
		This class includes :			
		Manufacture of machinery for making paper pulp			
		Manufacture of paper and paperboard making machinery			
		Manufacture of dryers for wood, paper pulp, paper or paperboard			
		Manufacture of machinery producing articles of paper and paperboard			
		Manufacture of machinery for working soft rubber or plastics or for the manufacture of products of these materials: extruders, moulders, pneumatic tyre making or retreading machines and other machines for making a specific rubber or plastic product			
		Manufacture of printing and bookbinding machines and machines for activities supporting printing on a			
		Manufacture of machinery for producing tiles, bricks, shaped ceramic pastes, pipes, graphite electrodes, blackboard chalk, foundry moulds, etc.			
		Manufacture of semi-conductor manufacturing machinery			
		Manufacture of industrial robots performing multiple tasks for special purposes			
		Manufacture of diverse special machinery and equipment :			
		machines to assemble electric or electronic lamps, tubes (valves) or bulbs			

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		machines for production or hot-working of glass or glassware, glass fibre or yarn			
		machinery or apparatus for isotopic separation			
		Manufacture of tire alignment and balancing equipment; balancing equipment (except wheel balancing)			
		Manufacture of central greasing systems			
		Manufacture of aircraft launching gear, aircraft carrier catapults and related equipment			
		Manufacture of automatic bowling alley equipment (e.g. pin-setters)			
		Manufacture of roundabouts, swings, shooting galleries and other fairground amusements

### **DIVISION 30. MANUFACTURE OF OTHER TRANSPORT EQUIPMENT**

This division includes the manufacture of transportation equipment such as ship building and boat manufacturing, the manufacture of railroad rolling stock and locomotives, air and spacecraft and the manufacture of parts thereof.

301

Building of ships and boats

This group includes the building of ships, boats and other floating structures for transportation and other commercial purposes, as well as for special recreational purposes.

3011

Building of ships and floating structures

This class includes the building of ships, except vessels for sports or recreation and construction of floating structures.

This class includes:

Building of commercial vessels: passenger vessels, ferry-boats, cargo ships, tankers, tugs etc.

Building of warships

Building of fishing boats and fish-processing factory vessel

This class also includes :

Building of hovercraft (except recreation-type hovercraft)

Construction of drilling platforms, floating or submersible

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		Construction of floating structures: floating docks, pontoons, coffer-dams, floating landing stages, buoys, floating tanks, barges, lighters, floating cranes, non-recreational inflatable rafts, etc.			
		Manufacture of sections for ships and floating structures			
		<i>This class excludes :</i>			
		<i>Manufacture of parts of vessels, other than major hull assemblies: manufacture of sails, see 1392; manufacture of iron or steel anchors, see 2599; manufacture of marine engines, see 2811;</i>

302	3020	Manufacture of railway locomotive and rolling stock			
		This class includes :			
		Manufacture of electric, diesel, steam and other rail locomotives			
		Manufacture of self-propelled railway or tramway coaches, vans and trucks, maintenance or service vehicles			
		Manufacture of railway or tramway rolling stock, not self-propelled: passenger coaches, goods vans, tank wagons, self-discharging vans and wagons, workshop vans, crane vans, tenders, etc.			
		Manufacture of specialized parts or railway or tramway locomotives or of rolling stock : bogies, axles and wheels, brakes and parts of brakes; hooks and coupling devices, buffers and buffer parts; shock absorbers; wagon and locomotive frames; bodies; corridor connections, etc.			
		This class also includes :			
		Manufacture of mechanical and electromechanical signalling, safety and traffic control equipment for railways, tramways, inland waterways, roads, parking facilities, airfields, etc.			
		Manufacture of mining locomotives and mining rail cars			
		Manufacture of railway car seats			
		<i>This class excludes :</i>			
		<i>Manufacture of unassembled rails, see 241;</i>

			Manufacture of helicopters			
			Manufacture of gliders, hang gliders			
			Manufacture of dirigibles and hot air balloons			
			Manufacture of parts and accessories of the aircraft of this class :			
			major assemblies such as fuselages, wings, doors, control surfaces, landing gear, fuel tanks, nacelles, etc.			
			airscrews, helicopter rotors and propelled rotor blades			
			motors and engines of a kind typically found on aircraft			
			parts of turbojets and turbo propellers for aircraft			
			Manufacture of ground flying trainers			
			Manufacture of spacecraft and launch vehicles, satellites, planetary probes, orbital, shuttles			
			Manufacture of intercontinental ballistic (ICBM), and similar missiles			
			This class also includes overhaul and conversion of aircraft or aircraft engines.			
			<i>This class excludes :</i>

### **DIVISION 31. MANUFACTURE OF FURNITURE**

This division includes the manufacture of furniture and related products of any material except stone, concrete and ceramic. The processes used in the manufacture of furniture are standard methods of forming materials and assembling components, including cutting, moulding and laminating. The design of the article, for both aesthetic and functional qualities, is an important aspect of the production process

### **DIVISION 32. OTHER MANUFACTURING**

This division includes the manufacture of a variety of goods not covered in other parts of the classification. Since this is a residual division, production processes, input materials and the use of the produced goods can vary widely and usual criteria for grouping classes into divisions have not been applied here

321		Manufacture of jewelry, bijouterie and related articles
		This group includes the manufacture of jewelry and imitation jewelry articles.
3211		Manufacture of jewelry and related articles
		This class includes :
		Production of worked pearls
		Production of precious and semi-precious stones in the worked state, including the working of industrial quality stones and synthetic or reconstructed precious or semi-precious stone
		Working of diamonds
		Manufacture of jewelry of precious metal or of base metals clad with precious metals or precious or semi-precious stones or of combinations of precious metal or semi-precious stones or of other materials
		Manufacture of goldsmith's articles or precious metals or of base metals clad with precious metals : dinnerware, flatware, hollowware, toilet articles, office or desk articles, articles for religious use, etc.

### **DIVISION 33. REPAIR AND INSTALLATION OF MACHINERY AND EQUIPMENT**

This division includes the specialized repair of goods produced in the manufacturing sector with the aim to restore machinery, equipment and other products to working order. The provision of general or routine maintenance (i.e. servicing) on such products to ensure they work efficiently and to prevent breakdown and unnecessary repairs is included.

This division does only include specialized repair and maintenance activities. A substantial amount of repair is also done by manufactureres of machinery, equipment and other goods, in which case the classification of units engaged in these repair and manufacturing activities is done according to the value-added principle which would often assign these combined activities to the manufacture of the good. The same principle is applied for combined trade and repair

The rebuilding or remanufacturing of machinery and equipment is considered a manufacturing activity and included in other divisions of this section.

Repair and maintenance of goods that are utilized as capital goods as well as consumer goods is typically classified as repair and maintenance of household goods (e.g. office and household furniture repair, see 9524).

Also included in this division is the specialized installation of machinery. However, the installation of equipment that forms an integral part of buildings or similar structures, such as installation of electrical wiring, installation of escalators or installation of air-

## SECTION D. ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY

This section includes the activity of providing electric power, natural gas, steam, hot water and the like through a permanent infrastructure (network) of lines, mains and pipes. The dimension of the network is not decisive. Also included are the distribution of electricity, gas, steam, hot water and the like in industrial park or residential buildings.

This section therefore includes the operation of electric and gas utilities, which generate, control and distribute electric power or gas. Also included is the provision of steam and air-conditioning supply.

*It excludes the operation of water and sewerage utilities, see 36, 37 and (typically long distance) transport of gas through pipelines.*

351	3510	35100	Electric power generation, transmission and distribution	E40100	3510	351
-----	------	-------	--	--------	------	-----

This includes the generation of bulk electric power, transmission and distribution to end users.

This class includes :

Operation of generation facilities that produce electric energy, including thermal, nuclear, hydroelectric, gas turbine, diesel and renewable

Operation of transmission systems that convey the electricity from the generation facility to the distribution system

Operation of distribution systems (i.e. consisting of lines, poles, meters, and wiring) that convey electric power received from the generation facility or the transmission system to the final consumer

Sale of electricity to the user

Activities of electric power brokers or agents that arrange the sale of electricity via power distribution systems operated by others

Operation of electricity and transmission capacity exchanges for electric power

*This class excludes production of electricity through incineration of waste, see 3821*

**SECTION E. WATER SUPPLY; SEWERAGE,  
WASTE MANAGEMENT  
AND REMEDIATION ACTIVITIES**

This section includes activities related to the management of various forms of waste, such as solid or non-solid industrial or household waste, as well as contaminated sites. The output of the waste or sewage treatment process can either be disposed of or become an input into other production processes. Activities of water supply are also grouped in this section, since they are often carried out in connection with, or by units also engaged in, the treatment of sewage.

**Division 36. Water collection, treatment and supply**

This includes the collection, treatment and distribution of water for domestic and industrial needs. Collection of water from various sources, as well as distribution by various means is included.

The operation of irrigation canals is also included, however the provision of irrigation services through sprinklers, and similar agricultural support services, is not included.

This class includes :

Collection of water from rivers, lakes, wells, etc.

Collection of rain water

Purification of water from water supply purposes

Treatment of water for industrial and other purposes

Distribution of water through mains, by trucks or

Desalting of sea or ground water to produce water as the principal product of interest

Collecting and transporting of human or industrial wastewater from one or several users, as well as rain water by means of sewerage networks, collectors, tanks and other means of transport (sewage vehicles, etc.)

Emptying and cleaning of cesspools and septic tanks, sinks and pits from sewage; servicing of chemicals toilets

Treatment of wastewater (including human and industrial wastewater, water from swimming pool, etc.) by means of physical, chemical and biological processes like, dilution, screening, filtering, sedimentation etc.

Maintenance and cleaning of sewers and drains, including sewer rodding

### **DIVISION 38. WASTE COLLECTION, TREATMENT AND DISPOSAL ACTIVITIES; MATERIALS RECOVERY**

This division includes the collection, treatment and disposal of waste materials. This also includes local hauling of waste materials and the operation of materials recovery facilities (i.e.those that sort recoverable materials from a waste stream).

381			Waste collection			
-----	--	--	------------------	--	--	--

## SECTION F. CONSTRUCTION

This section includes general construction and specialized construction activities for buildings and civil engineering works. It includes new work, repair, additions and alterations, the erection of prefabricated buildings or structures on the site and also construction of a temporary nature.

General construction is the construction of entire dwellings, office buildings, stores and other public and utility buildings, farm buildings etc., or the construction of civil engineering works such as motorways, streets, bridges, tunnels, railways, airfields, harbours and other water projects, irrigation systems, sewerage systems, industrial facilities, pipelines and electric lines, sports facilities etc.

This work can be carried out on own account or on a fee or contract basis. Portions of the work and sometimes even the whole practical work can be subcontracted out. A unit that carries the overall responsibility for a construction project is classified here. Also included is the repair of buildings and engineering works.

This section includes the complete construction of buildings (division 41), the complete construction of civil engineering works (division 42), as well as specialized construction activities, if carried out only as a part of the construction process (division 43).

The renting of construction equipment with operator is classified with the specific construction activity carried out with this equipment. This section also includes the development of building projects for buildings or civil engineering works by bringing together financial, technical and physical means to realize the construction projects for later sale. If these activities are carried out not for later sale of the construction projects, but for their operation (e.g. renting of space in these buildings, manufacturing activities in these plants), the unit would not be classified here, but according to its operational activity, i.e. real estate, manufacturing etc.

### DIVISION 41. CONSTRUCTION OF BUILDINGS

GROUP	CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC code
			<p>This division includes general construction of buildings of all kinds. ## SECTION G. WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOTORCYCLES

This section includes wholesale and retail sale (i.e. sale without transformation) of any type of goods and the rendering services incidental to the sale of these goods. Wholesaling and retailing are the final steps in the distribution of goods. Goods bought and sold are also referred to as merchandise.

Also included in this section is the repair of motor vehicles and motorcycles.

Sale without transformation is considered to include the usual operations (or manipulations) associated with trade, for example, sorting, grading and assembling of goods, mixing (blending) of goods (for example, sand), bottling (with or without preceding bottle cleaning), packing, breaking bulk and repacking for distribution in smaller lots, storage (whether or not frozen or chilled), cleaning and drying of agricultural products, cutting out of wood fibreboards or metal sheets as secondary activities.

Division 45 includes all activities related to the sale and repair of motor vehicles and motorcycles, while Division 46 and Division 47 include all other sale activities. The distinction between Division 46 (wholesale) and Division 47 (retail sale) is based on the predominant type of customer.

### DIVISION 45. WHOLESALE AND RETAIL TRADE AND REPAIR OF MOTOR VEHICLES AND MOTORCYCLES

This division includes all activities (except manufacture and renting) related to motor vehicles and motorcycles, including lorries and trucks, such as the wholesale and retail sale of new and second-hand vehicles, the repair and maintenance of vehicles and the wholesale and retail sale of parts and accessories for motor vehicles and motorcycles. Also included are activities of commission agents involved in wholesale or retail sale of vehicles. This division also includes activities such as washing, polishing of vehicles, etc.

*This division does not include the retail sale of automotive fuel and lubricating or cooling products or the renting of motor vehicles or motorcycles.*

## SECTION O. PUBLIC ADMINISTRATION AND DEFENSE; COMPULSORY SOCIAL SECURITY

This section includes activities of governmental nature, normally carried out by the public administration. This includes the enactment and judicial interpretation of laws and their pursuant regulation, as well as the administration of programmes based on them, legislative activities, taxation, national defense, public order and safety, immigration services, foreign affairs and the administration of government programmes. This section also includes compulsory social security activities.

The legal or institutional status is not, in itself, the determining factor for an activity to belong in this section, rather than the activity being of a nature specified in the previous paragraph. This means that activities classified elsewhere in PSIC do not fall under this section, even if carried out by public entities. For example, administration of the school system (i.e. regulations, checks, curricula) falls under this section, but teaching itself does not (see Section P), and a prison or military hospital is classified to health (see Section Q). Similarly, some activities described in this section may be carried out by non-government units.

### DIVISION 84. PUBLIC ADMINISTRATION AND DEFENSE; COMPULSORY SOCIAL SECURITY

## SECTION P. EDUCATION

This section includes education at any level or for any profession, oral or written as well as by radio and television or other means of communication. It includes education by the different institutions in the regular school system at its different levels as well as adult education, literacy programmes, etc. Also included are military schools and academies, prison schools etc. at their respective levels. This section includes public as well as private education. Also includes instruction primarily concerned with sport and recreational activities and education support activities. Education can be provided in rooms, radio, television broadcast, Internet, correspondence or at home.

For each level of initial education, the classes include special education for physically or mentally handicapped pupils.

The breakdown of the categories in this section is based on the level offered as defined by the levels of Philippine Standard Classification of Education (PSCED).

## DIVISION 85. EDUCATION

This division includes public and private education of all types, provided by institutions as a full time education or on a part-time or intensive basis, at day time or in the evening and at any level or for any profession. The first three groups cover education that may be included under "the regular school system", i.e. a system of progressive school education for children and young people from the pre-school level through the university level. The breakdown of the categories is primarily based on the level of education offered.

Education can be provided in rooms, radio, television broadcast, Internet, correspondence or at home.

Pre-primary/pre-school education

GROUP CLASS	SUB-CLASS	INDUSTRY DESCRIPTION	PSIC 1994	ISIC Rev 4	ACIC Code
		<p>This group include activities to prepare young children to the first level of education, second stage. Such programs are directed mainly towards children becoming accustomed to group activities such as singing, dancing, participation in rhythm groups and group games to promote healthy and socially desirable habits. Also stressed is the development of skills in handling coloring, molding, lettering and similar materials as well as simple tools. Introduction to basic educational programs includes readiness in the learning areas. The entry to this level of education may begin at age three or four. The pre-primary/pre-school level may last from one to four years.</p> <p>Also included in this group are programs covering the initial stages of organized instruction for special children including the gifted and those who, due to mental, psycho-social or physical handicaps, are unable to participate in the same groups along with other children. Programs for the differently-abled children while having the same objectives as the core program, may be given in hospitals or in special schools or training centers or special classes in regular schools. Age of entry at this level cannot be specified for special children and the differently-abled.</p>
